# QGIS

A Free and Open Source Geographic Information System

A promotional banner for QGIS 3.18 Zürich. The background is a green-tinted historical map of a city, likely Zürich, showing streets, buildings, and a river. Overlaid on the map is a large, semi-transparent green circle containing the QGIS logo (a stylized 'Q' with a yellow and orange triangle). The text 'QGIS 3.18 Zürich' is written in large white letters across the circle, with 'has been released!' in smaller white letters below it. On the left and right sides of the circle are white circular arrows pointing left and right respectively. At the bottom of the banner, there is a dark green horizontal bar with white text.

**New release: 3.18!**

Get the [installer](#) or [packages](#) for your Operating System and read the [changelog](#).

# QGIS - Projects

## Simple Features for R

A package that provides [simple features access](#) for R. Package sf:

- represents simple features as records in a `data.frame` or `tibble` with a geometry list-column
- represents natively in R all 17 simple feature types for all dimensions (XY, XYZ, XYM, XYZM)
- interfaces to [GEOS](#) to support geometrical operations including the [DE9-IM](#)
- interfaces to [GDAL](#), supporting all driver options, `Date` and `POSIXct` and list-columns
- interfaces to [PROJ](#) for coordinate reference system conversions and transformations
- uses [well-known-binary](#) serialisations written in C++/Rcpp for fast I/O with GDAL and GEOS
- reads from and writes to spatial databases such as [PostGIS](#) using [DBI](#)
- is extended by pkg [lwgeom](#) for further liblwgeom/PostGIS functions, including some spherical geometry functions
